

HACCP plans for on-farm storage***In-crop phase***

Task 6: Checking crop quality before harvest		
Hazard: Crop may not satisfy market expectations. Whole crop may be downgraded	Preventive measure: Analyse a sample of the crop for protein, fungal damage etc and make alternative arrangements if necessary	Critical control point (CCP): Pre-harvest sample testing
Critical limit: Must meet specific market requirements	Monitoring: NA	Corrective action: If crop deviates from the required standard, make alternative marketing arrangements eg sell to pool
Verification/records: Sample results should be kept for discussion with buyers	Where to look: See weather damage ☐ and pre-harvest residues ☐ . For sample taking and analysis, see rapid in-field kits in Updates .
