

HACCP plans for on-farm storage**Harvesting**

Task 9: Choosing time of harvesting (2)		
Hazard: Late harvesting may lead to weather damage or yield loss	Preventive measure: Install grain dryers in areas where harvest rain is likely	Critical control point (CCP): Harvesting the crop
Critical limit: Grain may be harvested at about 16% moisture content with drying but must be less than 12.5% going into store	Monitoring: Daily inspection during critical period	Corrective action: Weather damaged grain must be segregated and sold at a lower grade
Verification/records:	Where to look: See preparing grain stores and machinery for storage □ ; Harvester cleaning checklist □ . Aeration equipment suppliers may have useful information □
