

HACCP plans for on-farm storage***Harvesting***

Task 16: Segregation of grain for storage or immediate sale		
Hazard: Quality loss due to failure to segregate best grain or quit poor grain	Preventive measure: Keep up to date assessment of changes in paddocks	Critical control point (CCP): Loading commodity into store
Critical limit: Grain segregated as much as physical conditions allow, consistent with segregation plan and quality of grain harvested	Monitoring: NA	Corrective action: NA
Verification/records:	Where to look: See the section on marketing options to find out about maximising the value of grain stored on farm □
