

Commodity information

What do you need to know?

Here are some questions to help you further develop your learning goals.

- Can you recognise—and respond to—the emerging opportunities and risks attached to on-farm storage of wheat and other crops?
- Are you able to predict your exposure to risk over time by storing (or not storing) different commodities on-farm?
- Are you able to evaluate your options?
- Can you explain to an associate or consultant the outlook for your commodity/commodities in the coming year and in the longer term?

By studying this and other sections of the web-CD, and by using our hotlinks to other information sources, you have the opportunity to achieve your goals.
