

HACCP plans for on-farm storage***Harvesting***

Task 15: Drying grain		
Hazard: Grain may be damaged in drying and later in store if badly dried	Preventive measure: Correct drying technique	Critical control point (CCP): Loading commodity into store
Critical limit: Dried grain must meet moisture content and temperature limits	Monitoring: NA	Corrective action: As for storage of damp grain
Verification/records:	Where to look: Drying is not covered on this CD. Check Updates on-line from time to time. Also see Alan Andrews <i>Storing, Handling and Drying Grain</i> , DPIQ, chapter 6, pp 58-72.
