

HACCP plans for on-farm storage***In-crop phase***

Task 7: Preparing harvesters & transporters to receive grain		
Hazard: Pests or residues in the machinery may contaminate the new crop	Preventive measure: Thorough cleaning and disinfestation prior to harvest	Critical control point (CCP): Disinfesting machinery before harvest
Critical limit: 100% effective	Monitoring: NA	Corrective action: If the machinery has not been cleaned urgent inspection and fumigation will be necessary
Verification/records: Farmers should maintain record of actions taken for possible verification	Where to look: See disinfestation of machinery, harvester cleaning checklist □ .
